

EGBC Victoria Branch, Vancouver Island Engineering Society, Herzberg Astronomy and Astrophysics Research Centre, and University of Victoria Engineering & Computer Science present:

AN EVENING WITH BOB McDONALD

(Host of CBC's Quirks & Quarks)

Tuesday 04 April 2023

6:30 PM – 8:00 PM

University of Victoria Engineering & Computer Science Building Room 123

Bob McDonald will present live an optimistic presentation exploring the incredible technologies we can use towards addressing the climate crisis based on his book "The Future is Now: Solving the Climate Crisis with Today's Technologies".

The absence of “regular” human activities during the pandemic has dramatically affected our environment: waters cleared, wildlife has been seen in cities, and whales returned to harbours. Bob McDonald turns his focus to global energy sources and shows how the global shutdowns may have been exactly what we needed to show us that a greener future is achievable.

This is not another “wake-up call” nor another plea to heed the climate science: this is an exploration of the incredible technologies that our species can use to get out of the mess we’ve made for ourselves. It is a work of immense optimism, to counteract the sense of doom that hangs over most discussions of the environment.

Bob will be available to sign your copy of his book, and the book will also be available for purchase.

Registration \$20.00 (\$10.00 for students) at:
